

EMBEDDING CASE STUDY

EV injection moulding

Blind, threaded connection point within injection moulded electric vehicle batteries for fastening terminals or other items onto.

Pre-defined Head shape and fixing size options to suit different mechanical loading requirements or space limitations.

Selection assistance and flexibility when you need it – support with defining your requirements, and alternative fixing sizes by special request

WHY BIGHEAD?

Where we add value

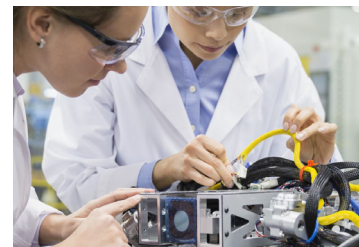

Design

Working in partnership, and offering design flexibility to satisfy unique application requirements.

Manufacturing

Assisting tooling & automation stakeholders to ensure successful, ontime start-of-production.

Assembly

Support with defining loadability limits and assembly parameters to eliminate guesswork.
